

Dental website with the bookings (Frontend to Backend)

● Project Overview

The Dental Booking Website is a functional online platform designed to simplify the process of booking dental appointments. Users can explore available dental services, view doctor profiles, check appointment availability, and schedule appointments through an interactive and user-friendly interface. The website also helps manage patient bookings efficiently by organizing appointment details, improving communication, and providing a smooth digital experience for both patients and clinic staff.

● Frontend Flow

1. Home Page

Features: Welcome banner, clinic information, services section, doctor highlights, appointment booking button, patient reviews.

Flow: User visits website → explores services and doctors → clicks “Book Appointment”.

2. Patient Registration

Fields: Name, Age, Gender, Mobile Number, Email, Address, Password.

Frontend Validation: Required fields, valid email format, phone number validation, password strength.

Flow: User fills registration form → validation performed → data sent to backend API.

3. Login Page

Features: Email login, password authentication, forgot password option.

Flow: User enters credentials → backend verifies details → user dashboard opens.

4. Patient Dashboard

Features: View profile, edit details, upcoming appointments, booking history, notifications.

Flow: After successful login → user redirected to dashboard.

5. Appointment Booking Page

Features: Select doctor, choose treatment, select appointment date and time slot.

Flow: User selects booking details → frontend sends booking request → confirmation displayed.

6. Doctor Profile Page

Features: Doctor photo, specialization, experience, available timings, consultation details.
Flow: User opens doctor profile → checks details → books appointment.

7. Appointment Management

Features: View appointments, cancel booking, reschedule appointment.
Flow: User selects appointment → updates or cancels booking → backend updates database.

Backend Flow

1. Backend Setup

Technologies: Node.js, Express.js, MySQL Database, REST API.
